Certified Safety Director (NASP)

COURSE DURATION
5 Hours

ADVANCED EHS CONCEPTS

Training Overview

Workplace injuries occur in every occupational setting. Employees face hazards on a daily basis which could cause harm to them or fellow employees. Additionally, employees can be injured due to accidents and health related problems. Even when all possible precautions are taken to prevent workplace accidents and injuries, there is still the chance they could occur. Employees need to be prepared and know the steps to take when an accident or injury occurs. Knowing the correct procedures to follow could minimize the injury.

Who should attend?

This course is designed for individuals who are responsible for administering first aid CPR care.

Aim

This programme is designed to help employees know the correct First Aid to administer. The instructor led session includes, visual aids, practical exercises and case studies.

Course Topics

This course covers the following topics:

- First Aid
- Bloodborne Pathogens
- Cuts and scrapes
- Burns
- Chemical exposures and burns
- Broken bones
- Heat exhaustion and heatstroke
- Choking
- First Aid requirements during COVID 19
- Post Test and Concluding remarks (20 question quiz)
